# EVENTS

## MONDAY APRIL 1

Fraunhofer-Gesellschaft  
Press tour  
**"Tomorrow's Industry:  
What's next?"**

---

### Time

---

1.30 p.m. – 2.30 p.m.

---

### Location

---

Hall 2, Booth C22 (joint  
Fraunhofer booth)

---

### Organizer

---

Fraunhofer-Gesellschaft

## TUESDAY APRIL 2

Fraunhofer-Gesellschaft  
Press breakfast  
**"Digital Solutions and  
New Materials"**

---

### Time

---

10.00 a.m. – 11.00 a.m.

---

### Location

---

Hall 6, Booth A30 (joint  
Fraunhofer booth)

---

### Speakers

---

Dr. Simone Kondruweit  
Fraunhofer IST  
Thomas Bendig  
Fraunhofer ICT Group

---

### Organizer

---

Fraunhofer-Gesellschaft

### Digital press kit

Our digital press kit includes information about all press events, as well as press releases, images and videos of our exhibits at the HANNOVER MESSE 2019 trade fair.

Our experts will gladly be available for interviews.  
Please get in touch!

### Contact

Janis Eitner  
Phone +49 89 1205-1333

## **TOMORROW'S INDUSTRY: WHAT'S NEXT?**

The future has always been the force that drives the Fraunhofer-Gesellschaft, Europe's largest applied research organization. Understanding the complex effects of new technologies is vital to the success of entire industries and national economies. Our researchers ask the right questions – and find new answers: solutions that bring companies immediate benefits.

How can we use learning systems and smart machines without losing control over our data? How do quantum effects help us communicate more securely and measure things more accurately? How can we harness nature's ingenuity to develop better and more sustainable technology? How can we transform materials in such a way that they alter their properties on demand? How can we preserve our jobs when the vehicles of the future run on electricity? How do we find a responsible way to ensure that everyone feels safe? And how do we know which idea is the right one?

As researchers, entrepreneurs and visionaries, we see ourselves as pacesetters and innovation drivers for the economy. Not only do we conduct research with excellence, we also identify new topics at an early stage and set things in motion for the future. As a result, we respond quickly and efficiently to market demands and our customers' needs.

Our employees are the key to our success. Just as our namesake did, they strike the right balance between research and entrepreneurship, take responsibility for the future and develop solutions for tomorrow's challenges. With more than 26,600 employees at 72 institutes and research institutions, we work across borders, sectors and disciplines in teams that are precisely tailored to the task at hand. Our customers benefit directly from our unique systems expertise across all fields of research.

Whether the topic is machine learning and artificial intelligence, data sovereignty and sensor technology, digital engineering and human-machine interaction, smart materials and resource efficiency or predictive maintenance and augmented reality: at the HANNOVER MESSE 2019, we will showcase the technologies that will truly shape the production of the future. **What's next?**

70 YEARS OF  
FRAUNHOFER  
**70 YEARS  
OF FUTURE**  
*#WHATSNEXT*

# FOCUS TOPICS IN HALL 2

## HALL 2 | BOOTH C22

---

### Customer Exchange and Interaction

---

Producing customized products, especially in batch sizes of one, is a central component of today's Industrie 4.0. Agile transformation processes enable companies to implement customer requirements quickly and precisely. However, they must have perfect quality management and secure data transmission systems in place, as this is the only way to ensure that, for instance, complete product tracking with cognitive sensor technology, voice assistants and image-based quality control function reliably. In this regard, the International Data Spaces initiative creates a secure data space that enables companies to independently manage their data assets.

---

### Planning and Processes

---

5G localization, predictive maintenance, machine learning, planning assistance and resource optimization using data-driven models are key terms for forward-looking digitally connected manufacturing. In the meantime, digital twins help manufacturers evaluate machinery, production plants and processes. Fraunhofer will be presenting "Process documentation in the age of the digital twin."

# FOCUS TOPICS IN HALL 2

## HALL 2 | BOOTH C22

---

### Machines and Materials

---

Even as digitalization continues its forward march, the key questions in manufacturing remain the same: Which material is most suitable? What machinery do I need? What does the ideal production process look like? Fraunhofer offers a number of answers and will, for instance, present an innovative technological approach to smart and sustainable process design. Status monitoring in industrial applications will also be addressed. Smart acoustic sensor technology facilitates real-time inspection of plants and machinery.

---

### Manufacturing and Human-Machine Interaction

---

Humans will play a key role in the production of the future. They will retain control even in the age of artificial intelligence, which is why gesture-based human-machine interaction – through speech recognition, for instance – is such a decisive factor. Other important topics, besides the control aspect, are stress monitoring and potential operator fatigue. We will also present information on smart sensors, digitally functionalized automotive components and a novel hybrid drive technology that offers high precision, dynamics and efficiency.

# FOCUS TOPICS IN HALL 2

HALL 2 | BOOTH C22

---

## **New Jobs and Skills**

---

Digitalization offers a wealth of opportunities, but also numerous challenges. What kind of technological future can we expect? What qualifications will we need to have in order to succeed in this future? Using augmented reality, we provide a first glance into the crystal ball to identify technological trends and to boldly look beyond our current horizons. We offer information on our extensive training programs, and we invite you to stop and take a look at the multifaceted career opportunities available at Fraunhofer.

---

## **Logistics and Technologies**

---

The Internet of Things takes supply chain management to the next level. We are seeing entirely new ways to track and identify goods, for instance using RFID technology. Today, not only do we know where goods are located, we also know exactly what they are composed of. In addition, packaged goods can be screened in real time using millimeter-wave radar. Discover a wide range of new tracking and organization options for revolutionizing your logistics with a view to the future.

# FOCUS TOPIC IN HALL 6

HALL 6 | BOOTH A30

---

## Digital solutions and new materials

---

When it comes to the industry of the future, two of the biggest topics are digital solutions and new materials. In Hall 6, Fraunhofer experts will present tailor-made surfaces equipped with a wide array of functions as well as forward-looking solutions in the fields of digitalization and artificial intelligence.

We will show how sensors can be used for adaptive manufacturing and what role 5G already plays today as well as showcasing a variety of sensor manufacturing technologies.

On the promising topic of customized surfaces, we will be presenting an exact simulation of coating processes – as well as a dust particle simulation that says a lot about dust contamination in plasma coating systems. Using such examples as a battery factory, we let visitors experience material simulations along the entire process chain.

# FOCUS TOPIC IN HALL 17

HALL 17 | BOOTHS C24 AND C83

---

## Production and Automation

---

The digital transformation is in full swing in the business world. One key factor involved here is the cooperation between machines and humans. In Hall 17, the Fraunhofer Group for Production will present specific application examples, especially from the fields of human-machine interaction, robotics, smart maintenance, additive manufacturing and wireless connectivity.

We will present a novel system for gesture control in heavy-duty robotics, an application for motion assistance and a collaborative robot. Augmented reality is also playing an increasingly important role. Visitors will be able to experience this firsthand on sample applications, such as digital assistance for offshore wind park maintenance or for assembly support. In addition, we will present concrete potential applications for additive component manufacturing.

In the field of smart maintenance, we offer a customized workshop concept for all relevant topics – and we assist our customers in transferring the latest strategies and technologies.
